## **New production hall opened – HUESKER creates space for further growth in Dülmen**

**Dülmen – The HUESKER Group has officially opened its new production hall at its ‘Im Brömken’ site. With this extension, covering around 5,000 square metres, HUESKER is strengthening its production and logistics capabilities for its growing Geosynthetics, and Industry & Agriculture business divisions. At the opening on 15<sup>th</sup> June 2026, HUESKER welcomed representatives from the town of Dülmen, project partners, as well as employees and guests from the worlds of business and politics.**

The new hall has been in operation since the start of the year. With the official opening, HUESKER now marks the successful completion of the construction project, which was carried out both within the planned timeframe and within the allocated budget. The expansion increases the production area at the ‘Im Brömken’ site from 7,500 to a total of 12,500 square metres.

### **Investment in growth and future viability**

In recent years, the site had increasingly reached its spatial limits. Production, warehousing and order picking were spread across several areas. The new building now brings these together, ensuring shorter distances and more efficient processes. At the same time, it creates additional scope for further growth.

“By expanding our high-end site here in Dülmen, we are sending a clear signal, particularly in these times of geopolitical uncertainties. After all, manufacturing in Germany is not only sustainable and of the highest quality – it offers flexibility and reliable delivery,” explained HUESKER Managing Director Dr. F.-Hans Grandin, adding: “This is our promise as a premium supplier to our loyal customers.” Grandin also emphasised the excellent cooperation with the town of Dülmen and expressed his thanks to the employees present as well as representatives of the Bielefeld-based construction company Goldbeck, which carried out the work.

### **An economic driver for the region**

In his welcoming address, Dülmen's Mayor, Carsten Hövekamp also praised the swift and professional completion of the new hall. "This is the result when many small cogs mesh together efficiently. The coordination between all those involved simply worked well," said Hövekamp, who sees the new hall, above all, as a clear commitment to the region. He described the investment as an important step for Dülmen as a business location. "We look forward to further fruitful collaboration," concluded the CDU politician.

### **Building whilst operations continue**

Integrating the new building into existing structures whilst production was underway presented a particular challenge. To connect it to the existing hall buildings, an external wall had to be dismantled and replaced with a temporary dust barrier – without interrupting ongoing production.

"Our aim was to carry out the construction work in such a way that our customers would not be affected. Completing the hall on schedule whilst maintaining full operations required precise planning and close cooperation between all those involved," explained Heinz-Georg Richels, Production Director at HUESKER.

In addition to optimising production processes, sustainability and energy efficiency were also key considerations. The new hall is equipped with underfloor heating throughout, powered by an air-source heat pump. The concept is complemented by the use of electricity from the existing photovoltaic system.

### **A strong location with a promising future**

More than 130 employees already work at the HUESKER site in Dülmen – including those at the subsidiary NaBento Vliesstoff GmbH. Thanks to the latest expansion, the company is creating space for the future development of its business divisions whilst simultaneously strengthening the Dülmen site. This is because the expansion opens up long-term prospects for employment and growth.

In addition to modern production facilities, this requires, above all, qualified staff. That is why HUESKER will continue to invest in training and further education in the future and offers skilled workers long-term development opportunities.

## **HUESKER Synthetic GmbH – Expertise since 1861**

The HUESKER Group is one of the world's leading manufacturers of geosynthetics and technical textiles, with its headquarters in Gescher (North Rhine-Westphalia, Germany).

With around 500 employees, the company operates globally through 13 subsidiaries and trading and distribution partners in over 60 countries. As a pioneer in the textile weaving industry, HUESKER has been shaping international markets for more than 160 years. The HUESKER Group replaces conventional construction methods with sustainable and intelligent solutions drawn from the field of modern, high-performance technical textiles and composites.

With its products and services, the company offers solutions for earthworks and foundation engineering, road and transport infrastructure, environmental engineering, hydraulic engineering, mining, as well as applications in industry and agriculture. First-class engineering services, outstanding expertise in the production, coating and finishing of technical textiles, and a strong commitment to innovation are the keys to HUESKER's success. If a project is challenging, HUESKER will find a solution.
