

Area Engineer (Remote)

HUESKER is looking for an Area Engineer to support the development and growth of our business within a defined UK region. This role is suited to someone with a civil engineering, geotechnical, infrastructure, or construction background who wants to develop into a hybrid technical-commercial.

This is an excellent opportunity for an engineer with early to mid-level experience who is looking to combine technical problem solving, project development, customer engagement, and commercial responsibility within a supportive international business.

The Role

As Area Engineer, you will help identify, develop, and convert project opportunities across your territory. You will work with consultants, contractors, clients and internal HUESKER teams to promote value-engineered geosynthetic solutions that improve project performance and create commercial opportunities.

The role includes supporting preliminary design input, developing concept solutions, preparing technical proposals, and coordinating internal technical support where detailed design or specialist input is required.

This is a remote based role requiring regular travel across a defined area, with occasional travel elsewhere in the UK and internationally.

Key Responsibilities

You will be responsible for:

- ▶ Identifying and developing new project opportunities across the defined area
- ▶ Building relationships with consultants, contractors, clients and key stakeholders
- ▶ Supporting specification development and promoting HUESKER solutions
- ▶ Preparing preliminary design input, concept solutions and technical proposals
- ▶ Providing front-end technical support during project development
- ▶ Coordinating with internal design, sales, logistics, marketing and head office teams
- ▶ Attending face-to-face meetings, site visits, CPDs and technical presentations
- ▶ Managing customer activity, project opportunities, forecasting and reporting through Salesforce CRM
- ▶ Supporting regional business development and helping strengthen HUESKER's market presence

What We're Looking For

The ideal candidate will have:

- ▶ A degree, or equivalent experience, in Geotechnics, Civil Engineering, or a related discipline
- ▶ Around 3 to 5 years' experience in civil engineering, geotechnical, infrastructure, or related construction sectors
- ▶ A desire to move into a hybrid role combining engineering, customer engagement, specification and business development
- ▶ A sound understanding of ground engineering or related civil engineering applications
- ▶ The ability to contribute to preliminary design solutions and technical proposals
- ▶ Clear communication skills and confidence engaging with both technical and commercial stakeholders
- ▶ Strong organisational skills
- ▶ A proactive approach, with the ability to work independently while receiving appropriate support and guidance
- ▶ A desire to progress towards chartership, such as CEng or CGeol

Experience in geosynthetics or ground engineering would be advantageous.

What We Offer

- ▶ Competitive salary
- ▶ Company vehicle or car allowance
- ▶ Performance-related bonus
- ▶ Generous contributory pension scheme
- ▶ Private health insurance
- ▶ Mentoring and support towards professional development and chartership
- ▶ Opportunity to build a long-term technical commercial career with an international solutions business

Your Application

Applicants must have the right to work in the UK, hold a valid passport, and be willing and eligible to travel internationally when required. You should also hold a full UK driving licence.

How to Apply

If you're ready to take the next step in your engineering career and join a respected international company, please send your CV and a covering letter, stating where in the UK you are based to:
